Just infinite pro-p groups

- An infinite pro-*p* group *G* is just infinite if every non-trivial normal subgroup *N* is open in *G* (i.e. has finite index).
- Equivalently, *G* is just infinite if its proper quotients are finite.
- A simple group can be thought as a just non-trivial group.

Just infinite pro-p groups

- An infinite pro-*p* group *G* is just infinite if every non-trivial normal subgroup *N* is open in *G* (i.e. has finite index).
- Equivalently, G is just infinite if its proper quotients are finite.
- A simple group can be thought as a just non-trivial group.

Just infinite pro-p groups

- An infinite pro-*p* group *G* is just infinite if every non-trivial normal subgroup *N* is open in *G* (i.e. has finite index).
- Equivalently, *G* is just infinite if its proper quotients are finite.
- A simple group can be thought as a just non-trivial group.

Leedham-Green's point of view

- A simple group is a group whose only non-trivial subnormal subgroup is the group itself.
- The corresponding notion in pro-p group context is that of a hereditarily just infinite pro-p group: namely a pro-p group whose non-trivial subnormal subgroups have finite index.
- Equivalently a pro-*p* group is hereditarily just infinite if its open subgroups are just infinite (i.e. they inherit the property of being just infinite).

Elementary refinement of a series

- Insert a new term N strictly between two terms G_i and G_{i+1} of a series S: let S' the new series obtained.
- The section G_{i+1}/G_i is replaced by two sections: G_{i+1}/N and N/G_i .

$$\begin{aligned} |G_{i+1}:G_i| < \infty \quad G_i \vdash \text{finite} \rightarrow N \vdash \text{finite} \rightarrow G_{i+1} \\ |G_{i+1}:G_i| = \infty \quad \begin{vmatrix} G_i \vdash \text{infinite} \rightarrow N \vdash \text{finite} \rightarrow G_{i+1} \\ G_i \vdash \text{finite} \rightarrow N \vdash \text{infinite} \rightarrow G_{i+1} \end{vmatrix} \\ L_{\infty}(\mathbf{S}') = L_{\infty}(\mathbf{S}) \\ L_{\infty}(\mathbf{S}') = L_{\infty}(\mathbf{S}) \end{aligned}$$

The length $L_{\infty}(S)$ denotes the number of infinite sections of S.

Monti et al. (Univ. L'Aquila and Insubria)

$$\begin{aligned} |G_{i+1}:G_i| < \infty \quad G_i & \vdash \text{ finite } \dashv N \vdash \text{ finite } \dashv G_{i+1} \\ |G_{i+1}:G_i| = \infty \quad \begin{vmatrix} G_i \vdash \text{ infinite } \dashv N \vdash \text{ finite } \dashv G_{i+1} \\ G_i \vdash \text{ finite } \dashv N \vdash \text{ infinite } \dashv G_{i+1} \end{vmatrix} \\ L_{\infty}(\mathbf{S}') = L_{\infty}(\mathbf{S}) \\ H_{\infty}(\mathbf{S}') = L_{\infty}(\mathbf{S}) \\ H_{\infty}(\mathbf{S}) \\ H_{\infty}(\mathbf{S}) \\ H_{\infty}(\mathbf{S}) \\ H_{\infty}(\mathbf{S}) = L_{\infty}(\mathbf{S}) \\ H_{\infty}(\mathbf{S}) \\ H_{\infty$$

The length $L_{\infty}(S)$ denotes the number of infinite sections of S.

Monti et al. (Univ. L'Aquila and Insubria)

Pro-*p* Groups of Finite Virtual Length

Elementary refinement of a series

- Insert a new term N strictly between two terms G_i and G_{i+1} of a series S: let S' the new series obtained.
- The section G_{i+1}/G_i is replaced by two sections: G_{i+1}/N and N/G_i .

$$\begin{split} |G_{i+1}:G_i| < \infty \quad G_i & \vdash \text{ finite } \dashv N \vdash \text{ finite } \dashv G_{i+1} \\ |G_{i+1}:G_i| = \infty \quad \begin{vmatrix} G_i \vdash \text{ infinite } \dashv N \vdash \text{ finite } \dashv G_{i+1} \\ G_i \vdash \text{ finite } \dashv N \vdash \text{ infinite } \dashv G_{i+1} \\ G_i \vdash \text{ infinite } \dashv N \vdash \text{ infinite } \dashv G_{i+1} \end{vmatrix} \\ L_{\infty}(\mathbf{S}') = L_{\infty}(\mathbf{S}) \end{split}$$

The length $L_{\infty}(S)$ denotes the number of infinite sections of S.

• If G_{i+1}/G_i is just infinite we have only the case

 $G_i \vdash \text{infinite} \rightarrow N \vdash \text{finite} \rightarrow G_{i+1}$

• However N/G_i is not necessarily just infinite. In this case a further refinement can yield a series of greater length.

 $G_i \vdash$ infinite $\dashv M \vdash$ infinite $\dashv N \vdash$ finite $\dashv G_{i+1}$

• Maybe more steps are needed to get a series of greater length.

 If G_{i+1}/G_i is hereditarily just infinite every iterated refinement (between G_{i+1} and G_i) replaces an infinite section with a finite section and an infinite one so the length is stable.

• If G_{i+1}/G_i is just infinite we have only the case

 $G_i \vdash \text{infinite} \dashv N \vdash \text{finite} \dashv G_{i+1}$

 However N/G_i is not necessarily just infinite. In this case a further refinement can yield a series of greater length.

 $G_i \vdash \text{infinite} \longrightarrow M \vdash \text{infinite} \longrightarrow N \vdash \text{finite} \longrightarrow G_{i+1}$

• Maybe more steps are needed to get a series of greater length.

 If G_{i+1}/G_i is hereditarily just infinite every iterated refinement (between G_{i+1} and G_i) replaces an infinite section with a finite section and an infinite one so the length is stable.

• If G_{i+1}/G_i is just infinite we have only the case

 $G_i \vdash \text{infinite} \dashv N \vdash \text{finite} \dashv G_{i+1}$

 However N/G_i is not necessarily just infinite. In this case a further refinement can yield a series of greater length.

• If every section of a series **S** is either hereditarily just infinite or finite then $L_{\infty}(S') = L_{\infty}(S)$ for every refinement of **S**.

 We say that a series S with this property is a virtual composition series (namely if L_∞(S') = L_∞(S) for every refinement of S).

Questions

- When does a virtual composition series exist?
- Which is the relation between two virtual composition series?
- Is a virtual composition series with all sections either finite or hereditarily just infinite somehow typical?

- If G is hereditarily just infinite then vI(G) = 1.
- If N is a normal subgroup of G then vl(G) = vl(G/N) + vl(N) (we admit ∞ in this sum).
- If *H* is a subnormal subgroup then vl(*H*) ≤ vl(*G*): equality holds if and only if *H* is open.
- If $G = N_1 \oplus N_2 \oplus \cdots \oplus N_r$ then $vl(G) = vl(N_1) + vl(N_2) + \cdots + vl(N_r).$

Theorem

- vl(G) = 0 if and only if G is finite.
- If G is hereditarily just infinite then vI(G) = 1.
- If N is a normal subgroup of G then vl(G) = vl(G/N) + vl(N) (we admit ∞ in this sum).
- If *H* is a subnormal subgroup then vl(*H*) ≤ vl(*G*): equality holds if and only if *H* is open.
- If $G = N_1 \oplus N_2 \oplus \cdots \oplus N_r$ then $vl(G) = vl(N_1) + vl(N_2) + \cdots + vl(N_r).$

Theorem

They have finite virtual length

- A pro-*p* group has finite rank if there exists *r* such that every subgroup can be generated by *r* elements.
- A pro-*p* group of finite rank contains an open uniform subgroup.
- The dimension dim *G* of a pro-*p* group *G* of finite rank is the number of generators of an open uniform subgroup of *G*.
- Dimension is additive: if N is a normal subgroup of G then dim G = dim(G/N) + dim N.

Theorem

A pro-p group G of finite rank has finite virtual length. More precisely $vI(G) \le \dim G$ and the equality holds if and only if G is soluble.

Theorem

Let G be a pro-p group with finite virtual length. Then:

- G is finitely generated;
- every subnormal subgroup is finitely generated;
- every non-empty family of subnormal subgroups with bounded defect admits a maximal element.

Corollary

Every non-empty family of normal subgroups of G closed under taking products (e.g. finite normal subgroups) admits a greatest element.

Proposition

For a pro-p group G the following are equivalent:

- vl(G) = 1;
- there exists a finite normal group N such that G/N is hereditarily just infinite;
- there exists an open normal subgroup H such that H is hereditarily just infinite.

Theorem

Every virtual composition series of a pro-p group with finite virtual length can be refined to a virtual composition series whose sections are either hereditarily just infinite or finite cyclic of order p.

< ロ > < 同 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ >

• Virtual composition series and virtual length can be defined also for profinite group.

- Even more: they can defined also for profinite groups with operators (once a suitable notion of profinite group with operators has been introduced).
- Basic results hold in this more general context.
- Stronger structural results do not hold however: e.g. there exist hereditarily just infinite profinite groups (hence with virtual length 1) which are not finitely generated (Wilson).
- Structural results can be stated (and proved) for pronilpotent groups with operators.

- Pro-p groups of finite rank can be defined as pro-p groups in which the number of generators of subnormal subgroups has an upper bound.
- Pro-*p* groups of finite rank have finite virtual length.
- There exist groups of finite virtual length with infinite rank (e.g. the Nottingham group).
- In pro-p groups of finite virtual length every subnormal subgroup is finitely generated.

Question

Let G be a pro-p group whose subnormal subgroups are finitely generated. Is the virtual length of G finite?

3
